

Applied Geoinformatics For Society And Environment

an international geoinformatics journal

Applied Geoinformatics for Society and Environment is a quarterly journal that addresses scientific, societal, environmental issues from a technological spatial perspective that utilizes tools of Geographic Information Systems, Remote Sensing and Photogrammetry. Its scope is wide in that it hopes to provide an avenue for the publication of core S&T articles alongside those that explore the socio-cultural space of society, from the perspective of GIS. This is an initiative under the aegis of the Stuttgart Active Alumni Group.
